Summary

Product name	Equity Digital Option Quanto Basket (Buy)
Issuer of this document	Nordea Bank Abp (hereafter "Nordea")
Regulated by	Finnish Financial Supervisory Authority
Produced	22.09.20

What is this product?

Description

An equity digital option (EDO) is an agreement between two parties giving the buyer (the holder) the right to receive a coupon payout on a specified future date (expiry date), if basket return is above or below a predefined barrier on any observation date. The payout is cash settled at a specified maturity date after the expiry date. The underlying instruments in the basket can be shares in specific companies or equity indices. The payout will be in the same currency as the basket notional, which can be different from the denomination currencies of the underlying shares or equity indices.
The basket return is calculated as weighed average of the performances of the underlying prices of the underlying instruments on specified observation dates. The observation dates for the basket can be any agreed business day. It can either be at the initial trade date or maturity date only or they can be determined periodically on a daily, weekly, monthly, quarterly or yearly basis. An EDO can either be a call option, in which case the coupon is paid if the basket return is greater than or equal to the barrier, or put option, in which case the coupon is paid if the basket return is less than or equal to the barrier. The agreement is binding for the seller of the option. It may be possible to terminate the transaction before the maturity date. As the market value of the transaction may have changed since it was initiated, an early termination will usually involve the initial seller paying the present market value to the initial buyer. Non-listed equity options, such as EDOs, are non-standardised products where trade details like time to maturity and strike price of the option will be individually agreed. The price (premium) is subject to change until the transaction is agreed upon. Non-standardised equity options are traded and settled through the broker issuing the option. The options will adhere to the rules set out by ISDA.

Intended investor

The product Equity Digital Option Quanto Basket (Buy) is aimed at professional clients and eligible counterparties, who are interested in capital growth, hedging, leveraged participation and income. The Equity Digital Option Quanto Basket (Buy) is a product for informed investors and advanced investors.*

What are the risks and what could I get in return?

The risk and profit loss descriptions relate to this product only.

If this product is combined with other products or commercial positions, the total portfolio will have a significantly different profile than the one for this product alone.

As the non-standardised option is not listed on a stock exchange or similar authorised market, the liquidity will be lower than for a listed option, which can make pricing less efficient.

When buying an option the loss is limited to the paid premium, whereas the potential for a profit is limited to the coupon amount.
When selling an option the potential profit is limited to the premium received, while the risk of a loss is limited coupon amount when delta hedging costs are excluded.
The market value of an EDO is exposed to the forward prices of the underlying instruments, the time to expiry, the implied volatility skew and the correlation between the underlying instruments.
A bought EDO (out-of-the-money call) is exposed to the market parameters listed in the matrices below. Specific case is needed as the risks profile can't be generically described.

* Informed investors have average knowledge of relevant financial products and/or some financial industry experience. Advanced investors have good knowledge of relevant financial products and transactions, and/or financial industry experience or accompanied by professional investment advice or included in a discretionary portfolio service.

What happens if Nordea Bank Abp is unable to pay out?

You are exposed to the risk that the issuer of this product or the counterparty (which may be Nordea), as applicable, might be unable to fulfil its obligations in respect of the product e.g. in the event of insolvency, an administrative order or bail-in. The product is not covered by any deposit protection scheme. Thus, you could lose the entire amount invested.

What are the costs?

The total costs take into account one-off, on-going, transaction, ancillary and incidental costs.
They include potential early exit penalties. The figures assume you invest 100,000 EUR nominal. The figures are estimates and may change in the future.
The costs charge for the investment is dependent on the risks associated with the transaction and the term of the investment.
We may include additional costs and charges on a case by case basis. If so, Nordea will provide you with information about these costs and charges prior to the point of sale, and will explain the impact that these costs will have on your investment over time.

Investment (based on above nominal)	**Cumulative Costs**
Combined cost to buy and exit the product	0
% p.a. of nominal	0
