<b>Product name</b>	FX Option: Double One Touch Option
<b>Issuer of this document</b>	Nordea Bank Abp (hereafter "Nordea")
<b>Regulated by</b>	Finnish Financial Supervisory Authority
<b>Produced</b>	22.09.20

## What is this product?

### Description

An FX double touch option is an agreement between two parties giving the buyer of the option the right to receive an agreed amount of cash (the payout) if and only if the FX spot rate of a specified currency pair reaches either of the two barriers before or at a specified future date (expiry date).

If the FX spot rate reaches one of the two barriers at any time during the life of the option, the payout will fall due at the option's maturity date, normally two business days after the expiry date. The payout has to be agreed at inception and must be settled in one of the currencies in the underlying currency pair of the option.

The price is subject to change until the transaction is agreed upon.

The agreement is binding for the seller of the option. However, it will be possible to terminate the transaction before maturity. If the transaction has a market value, an early termination may involve the initial seller paying the present market value to the buyer.

### Intended investor

The product FX Option: Double One Touch Option is aimed at professional clients and eligible counterparties, who are interested in capital growth and hedging, income and other investment objectives. The FX Option: Double One Touch Option is a product for informed investors and advanced investors.\*

## What are the risks and what could I get in return?

The product and risk and profit/loss descriptions relate to this product only.

If this product is combined with other products or commercial positions, the total portfolio will have a significantly different profile than the one for this product alone. The market value of an FX double touch option is exposed to changes in the FX spot rate, the FX rate volatility, the market rate of interest in both currencies and the time to expiry of the option.

The closer the current spot rate for the underlying currency cross is to any one of the barriers, the more expensive the option becomes, as the probability increases that one of the barriers will be breached.

Thus, if the FX spot rate moves closer to the nearest barrier, the value of the option increases. If the FX spot rate moves away from the nearest barrier the value of the option decreases.

The higher volatility and the longer the time to expiry of the option, the higher market value of the option, since the probability increases that the underlying will touch a barrier.

In the following we express the FX spot rate as units of ccy2 per 1 unit of ccy1.

When buying an FX double touch option the loss is limited to the premium paid, whereas the potential for a profit is limited to the agreed payout. When selling an FX double touch option the profit is limited to the premium received, while the risk of a loss is limited to the agreed payout. The risks in an FX double touch option are thus limited and known in advance.

The market value of an FX double touch option is exposed to the market parameters listed in the matrix below.

Market Parameters	FX Option: Double One Touch Option	
	Influence on market value when increasing	Influence on market value when decreasing
FX spot rate	+/-	+/-
Interest rate ccy1	+/-	+/-
Interest rate ccy2	+/-	+/-
FX rate volatility	+	-
Time to expiry	+	-

## What happens if Nordea Bank Abp is unable to pay out?

You are exposed to the risk that the issuer of this product or the counterparty (which may be Nordea), as applicable, might be unable to fulfil its obligations in respect of the product e.g. in the event of insolvency, an administrative order or bail-in. The product is not covered by any deposit protection scheme. Thus, you could lose the entire amount invested.

\* Informed investors have average knowledge of relevant financial products and/or some financial industry experience. Advanced investors have good knowledge of relevant financial products and transactions, and/or financial industry experience or accompanied by professional investment advice or included in a discretionary portfolio service.

## What are the costs?

The total costs take into account one-off, on-going, transaction, ancillary and incidental costs.

They include potential early exit penalties. The figures assume you invest 100,000 EUR nominal. The figures are estimates and may change in the future.

The costs charge for the investment is dependent on the risks associated with the transaction and the term of the investment.

We may include additional costs and charges on a case by case basis. If so, Nordea will provide you with information about these costs and charges prior to the point of sale, and will explain the impact that these costs will have on your investment over time.

Investment (based on above nominal)	Cumulative Costs
Combined cost to buy and exit the product	4000
% p.a. of nominal	4.0

## Composition of costs on purchase of the product
